Create a passkey to access Montreal 2027

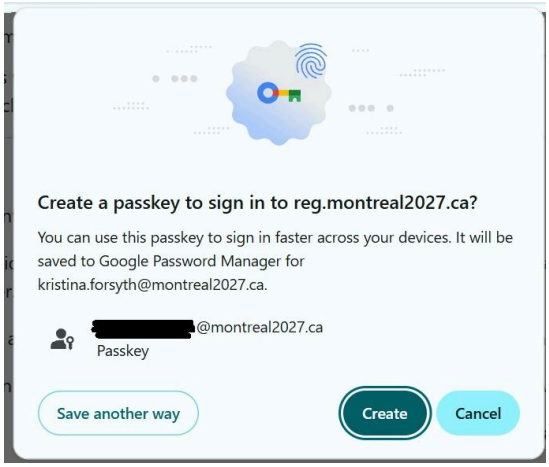

Before you can create a passkey you must set up an account, and then log in to that account. These instructions assume you have an account, and that you are logged in to it.

Go to the Membership Portal Home page. You can reach this page at https://reg.montreal2027.ca/ or by selecting Registration from the Membership dropdown menu on the convention home page.

There will be a button to create a passkey on the left.

A popup window will open offering to create your passkey. If you choose “save another way”, you will be offered other location options to save this passkey.

When you select create you will be asked to choose a PIN.

Once you have created your passkey you can use your PIN to log in to Montreal2027.ca. If you chose the default of Google Password Manager to store your passkey you will be able to use any other login options you have enabled on your devices, like fingerprint or face recognition.
